Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild guestions@onsemi.com.

FSA2275 / FSA2275A — DPDT (0.5 Ω) HiFi Audio Switch w/ **Negative Swing**

Features

- V_{DD} Operating Range: 2.5 to 5.5 V
- External Capacitor Connection for Pop and Click Noise Suppression
- Power-Off Protection on Common Ports
- $R_{ON} = 0.5 \Omega$ (Typ.) at 2.5 V V_{DD}
- THD+N = -105 dB; 2 V_{RMS} , 20 kΩ Load; f = 1 kHz
- $X_{TALK} = -134 \text{ dB}$ at 1 V_{RMS} , 50 Ω Load; f = 1 kHz
- Off Isolation = -103 dB at 1 V_{RMS} , 50 Ω Load; f = 1 kHz
- 12-Lead UMLP 1.8 mm x 1.8 mm
- Removed R SHUNT resistors for FSA2275A

Applications

- Mobile Phone, Tablet, Notebook PC, Media Player
- Docking Station, TV, Set-Top Box, LCD Monitor

Description

The FSA2275 / FSA2275A is a high-performance, Double-Pole Double-Throw (DPDT) analog switch with swing negative audio capability. FSA2275 / FSA2275A features ultra-low audio RON of 0.5Ω (typical) at 2.5 V V_{CC}. The FSA2275 / FSA2275A operates over a V_{CC} range of 2.5 V to 5.5 V, is fabricated with sub-micron CMOS technology to achieve fast switching speeds, and is designed for break-before-make operation. To minimize pop and click during operation, the turn on ramp time is selectable using an external capacitor (C_EXT).

The FSA2275 / FSA2275A THD+N features specifications that target a Hi-Fidelity audio quality into both 32 Ω headphones and line out type loads (>600 Ω).

The FSA2275A removes the shunt resistors which improve noise immunity.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.
